EDUCATION

University of Michigan, College of Literature, Science, and the Arts

Ann Arbor, MI

B.S. in Data Science

Aug 2023 – May 2027

- Relevant Coursework: Statistics and Artificial Intelligence, Database Management Systems, Data Structures and Algorithms, Statistical Computing, Introduction to Probability and Statistics, Discrete Mathematics
- Leadership: Founder of Good Karma Engineering; led operations and delivery of 50+ 3D printed prosthetic devices across multiple countries
- Organizations: Michigan Sports Analytics Society; Engineering Business Group

TECHNICAL SKILLS

Languages: Python, SQL (MySQL), C/C++, R

Frameworks & Tools: FastAPI, Docker, Git, Jira, AWS, GCP, Excel/Google Sheets

Data & AI: ETL pipelines, relational databases, LLM application development, computer vision, model evaluation, distributed systems, dashboard development

EXPERIENCE

Nano Ops

Boston, MA

AI Engineer

Jun 2026 – Aug 2026

- Built an AI-powered listing-verification pipeline using Python and vision LLMs to extract product specifications from images and SKUs into structured listings, reducing manual listing time from ~5 minutes to under 2 minutes per item and cutting supplier onboarding effort by ~60%
- Designed human-in-the-loop verification logic for fields including SKU, serial number, quantity, condition, and material specifications to improve listing accuracy before publication
- Conducted supplier and contractor interviews and translated workflow pain points into technical product requirements, helping drive a strategic pivot toward distributor surplus inventory

AfterQuery Experts

Ann Arbor, MI

Data Analyst

Aug 2025 – Present

- Built and maintained SQL and Python data pipelines processing 100K+ weekly user interaction records, reducing recurring reporting turnaround by ~30% and improving visibility into product performance
- Analyzed task completion, user activity, error patterns, and workflow drop-off to identify recurring product friction and inform feature and user-experience improvements
- Developed reusable reporting tables and KPI frameworks that translated broad product questions into structured metrics, analyses, and actionable stakeholder recommendations

Academic Analytics

New York, NY

Data Analyst

Jun 2025 – Sep 2025

- Analyzed \$10B+ in institutional purchasing data using SQL and Python to identify vendor concentration, unusual spending patterns, and operational-efficiency trends across institutions
- Identified approximately \$1–2M in purchasing categories with potential cost-saving opportunities, giving stakeholders specific vendors and spend areas for further investigation
- Built dashboards and automated recurring Python reporting workflows, reducing analysis and report-generation time by ~40% and accelerating delivery of financial and operational insights

PERSONAL PROJECTS

ReStock Verify: AI Listing-Verification API | *Python, FastAPI, Claude API, Docker*

- Built a FastAPI-based AI service that extracts structured product listings from photos and SKUs using a vision LLM, with Pydantic-validated outputs and a deterministic risk-tiering engine for verification requirements
- Implemented a labeled evaluation harness achieving 100% category and condition classification on the evaluation set, along with automated tests, linting, CI, and Docker containerization for Cloud Run deployment

SaaS Growth Analytics Dashboard | *Python, SQL, Streamlit, Plotly*

- Built and deployed an interactive data-visualization dashboard tracking funnel conversion, cohort retention, churn, and MRR from 55k+ event-level records, with a DuckDB SQL staging layer feeding all visuals from a single source of truth
- Surfaced acquisition-channel quality gaps, referral and organic signups activated at 61–67% vs. 43% for social, to guide marketing spend
