Education

University of Michigan, College of Literature, Science, and the Arts — Ann Arbor, MI
B.S. in Data Science, Minor in Economics — *Aug 2023 – May 2027*

- Relevant Coursework: Database Management Systems, Statistics and Artificial Intelligence, Statistical Computing, Data Structures and Algorithms, Introduction to Probability and Statistics, Discrete Mathematics
- Leadership: Founder of Good Karma Engineering; led operations and delivery of 50+ 3D printed prosthetic devices across multiple countries
- Organizations: Michigan Sports Analytics Society; Engineering Business Group, Pi Kappa Alpha Fraternity

Technical Skills

Analytics: Python, SQL (MySQL), R, Statistical Analysis, Data Visualization, Excel/Google Sheets
Data & Automation: ETL Pipelines, Reporting Automation, Data Validation, Dashboard Development
Cloud & Tools: AWS, GCP, Tableau, Docker, Git, Jira, Streamlit, Plotly, DuckDB, PowerPoint
Programming & AI: C/C++, LLM Applications, Computer Vision, Machine Learning

Experience

Nano Ops — Boston, MA
AI Engineer — *Jun 2026 – Aug 2026*

- Built an AI-powered data workflow using Python, LLMs, and image/SKU extraction, reducing manual listing time from ∼5 minutes to under 2 minutes and cutting onboarding effort by ∼60%
- Analyzed supplier workflows and customer feedback, identifying inventory availability and onboarding friction as major growth constraints and informing a strategic pivot toward distributor surplus inventory
- Established marketplace KPIs including match rate, sell-through rate, and time-to-fill, enabling performance monitoring and helping prioritize supplier acquisition and inventory-matching improvements

AfterQuery Experts — Ann Arbor, MI
Data Analyst — *Aug 2025 – Present*

- Built SQL and Python pipelines across 100K+ weekly user interaction records, cutting reporting turnaround by ∼30%
- Analyzed engagement, task completion, and workflow drop-off to identify key friction points, informing UX improvements that increased task completion by ∼12% and reduced abandonment by ∼15%
- Developed standardized reporting tables and KPI dashboards, reducing manual performance-tracking effort by ∼8 hours weekly and enabling faster identification of engagement trends

Academic Analytics — New York, NY
Data Analyst — *Jun 2025 – Sep 2025*

- Analyzed $10B+ in institutional purchasing data using SQL and Python, uncovering vendor concentration and purchasing inefficiencies across institutional spending categories
- Identified ∼$1–2M in potential cost-saving opportunities through comparative spending analysis, supporting procurement prioritization and vendor consolidation recommendations
- Built dashboards and automated recurring reporting workflows, reducing analysis and report-generation time by ∼40%

Personal Projects

SaaS Growth Analytics Dashboard | *Python, SQL, Tableau, Streamlit, Plotly, DuckDB*

- Built and deployed an interactive analytics dashboard tracking funnel conversion, cohort retention, churn, and MRR across 55K+ simulated event-level records using a centralized SQL staging layer
- Identified acquisition-channel performance gaps, including 61–67% activation for referral and organic users versus 43% for social (two-proportion z-test, $p < 0.001$), to support marketing and resource-allocation decisions

ReStock Verify: AI Listing-Verification API | *Python, FastAPI, Claude API, Docker*

- Built a Python API that transforms product images and SKUs into validated structured data using a vision LLM and deterministic risk-tiering logic that sets which verification steps each listing needs
- Implemented a labeled evaluation framework achieving 100% category and condition classification, with automated testing, CI, and a containerized deployment on Google Cloud Run
